FrontierDAO NFTs Unlock Scientific Discovery, Space Exploration & Fusion Energy Research - Just Launched on OpenSea

Oxford, UK & Paris, France - Nov. 8, 2021 -- FrontierDAO announced today the launch of their inaugural NFT Collection, devoted to unlocking scientific discovery through non-fungible tokens (NFT). Each purchase of this Limited Edition Bronze NFT Collection goes towards funding further research in space exploration, fusion energy and other scientific breakthroughs.

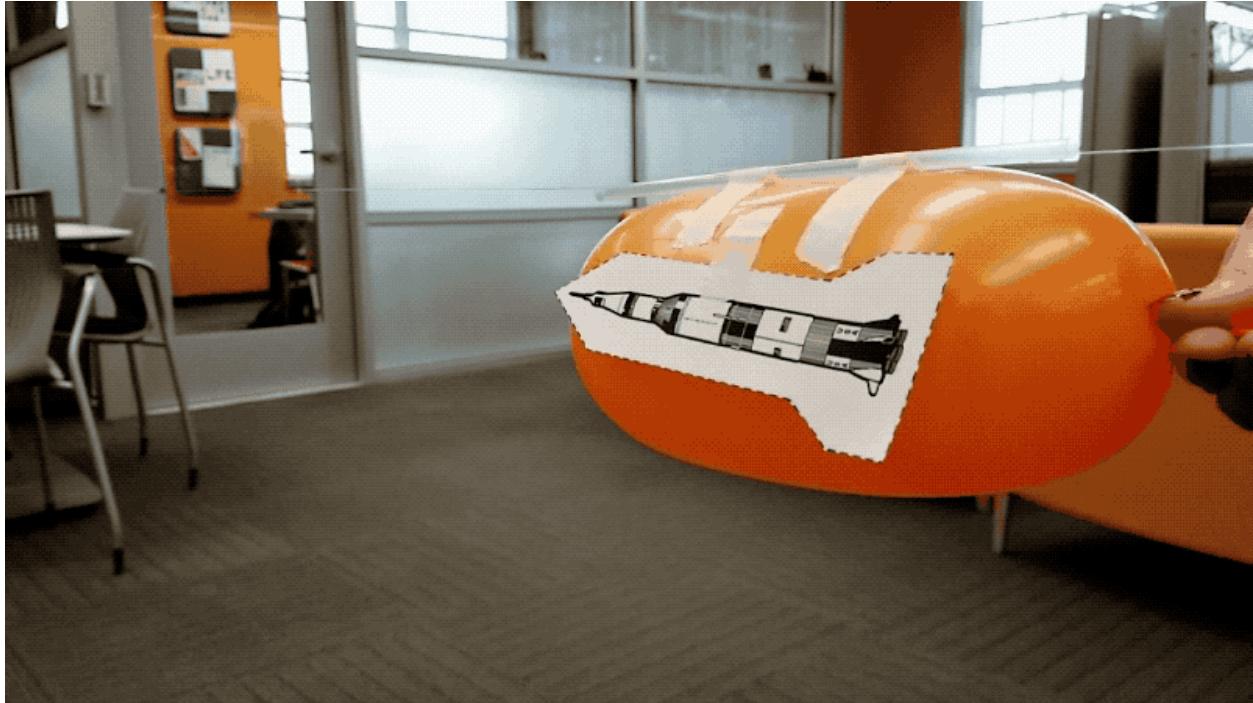

WTF is an NFT?

FrontierDAO is a decentralized autonomous organization whereby members join an exclusive club of like-minded science enthusiasts with the ability to vote on

the distribution of funds to worthwhile scientific efforts. It was founded in October 2021 by a team of two, a scientist and a creativity-meets-blockchain entrepreneur. The DAO's mission is to unlock greater funding resources through the sale of NFTs. Funding will be used for research in fusion energy, space exploration, and a variety of scientific fields, including, but not limited to, foodTech, STEAM, climate change, and other fields.

"We consider as mintable NFTs, not just images, videos, audio and .gifs, but also scientific breakthroughs such as computational equations, theoretical formulas, designs, and even essays," states co-founder Paige Donner. "My co-Founder, a widely recognized UK-based scientist who for now goes by the pseudonym Bounder Yo, likes to point to examples such as Einstein's E=MC2, Satoshi's white paper, and Nikolas Tesla's Induction Motor as examples of true breakthroughs in science. Breakthroughs such as these were pivotal moments in humanity that pushed us forward. For these types of breakthrough science NFTs, we have our Evergreen Collection. Furthermore, with FrontierDAO, we not only can mint truly momentous events in science but can also help fund efforts leading to even more breakthroughs," explained Donner.

Not just a pioneer in the field of science based NFTs, FrontierDAO has innovatively structured their funds allocation protocols, proving themselves to be a blockchain industry leader. The exact allocations are laid out in the

roadmap on their website, FrontierDAO.xyz, but the large majority of the funds raised through NFT sales goes to funding the DAO Treasury. The DAO Treasury acts as a sort of ‘Family Office’ or ‘Grants Fund’ where each person who has bought an NFT gets to vote on the projects that will be funded by the Treasury. This is a business model showcasing democracy-in-action when it comes to funding bleeding edge scientific research and innovation. NFTs also unlock special invites to virtual meetups, scientific presentations, members-only Zoom calls, even IRL tag-ups, and conferences in the future. For every NFT sold of any of the Bronze, Silver, Gold, Platinum, and Evergreen collections, 35% goes to the original artist and 65% goes to the DAO Treasury. Recurring sales royalties include 3.5% going to the artists, 3% going to the Treasury, and 2.5% going to the Founders.

Image NFTs are donated from artists, creators, engineers, and others who represent a wide swath of the scientific and artistic community. “We welcome contributions from anyone who feels they have a science themed creative digital asset to share. This is an incredibly challenging yet exciting time for human advancement and FrontierDAO will lead the way,” added Donner.

Stay tuned for their upcoming special capsule collection, Spacesuit NFTs, inspired by NASA’s Artemis Mission. Launching soon –
